EMPLOYMENT

Software Engineer **Mercedes-Benz R&D India** **July 2020 – Present**

- Developed the automatic blocking and unblocking feature to quickly block and unblock the vehicles without any manual intervention, which made the process 65% faster
- Built and integrated database utility tool to access the database within the application itself which increased the testing and debugging efficiency
- Migrate the JNLP based application and removed the JNLP dependency by implementing RESTful web services for the application

Software Engineer **Hewlett Packard Enterprise** **June 2018 – May 2020**

- Worked as a part of Entity Master Data Management team, design and build web services APIs that let the user manage and keep a track of orders and customer data
- Done Proof of concept on Jira issue tracking tool to monitor production issues for HPE and reduced the dependency of HP ALM tracking tool, accomplish almost 14% increase in productivity
- Worked on a legacy product of HPE, Master Data Control Point which is an enterprise data management application for maintaining the customer's data

TECHNICAL EXPERIENCE

Skills

- **Programming Languages** - Java
- **Frameworks and tools** – Restful Webservices, Spring Boot, Microservices, Unit Testing
- **Databases** - MySQL, SQL Server
- **Others** - Git, Maven, Jira, Swagger, Design Patterns
- **Operating Systems** - Linux, Windows

Projects

- **FAKT** (2021)- Quality checking system for vehicles in production, vehicles can be blocked if found any defect in manufacturing and unblocked after fixing the issue
- **LabS** (2020)- To test new components and parts before and during deployment in the vehicles
